Havana Elephant
Built on Base

PROJECT INFORMATION DOCUMENT

This document is not a crypto-asset white paper prepared or published pursuant to Article 6 of Regulation (EU) 2023/1114 (MiCA).

Important Notice

This document provides general information about the Havana Elephant ecosystem, including ContentLynk, the Havana Elephant Brand, its NFT collections and the \$HVNA utility token. It is intended to explain the structure, products, technology and intended utility of the ecosystem.

It is not a crypto-asset white paper prepared or published pursuant to Article 6 of Regulation (EU) 2023/1114 (MiCA). It does not constitute financial, investment, legal or tax advice.

The \$HVNA public offer commenced on 28 July 2026. The offer has been structured so that the total consideration of the offer to the public in the European Union does not exceed an internal maximum of €850,000 during the applicable 12-month period beginning on that date.

The \$HVNA token is intended for utility within the Havana Elephant ecosystem. It is not offered on the basis of a promise or guarantee of profit, return, yield or appreciation in value. Crypto-assets involve risk and may lose value.

Figures relating to creator revenue share are structural platform parameters describing how ContentLynk distributes revenue. They are not earnings forecasts. Actual amounts received by any creator depend on that creator's activity and on platform revenue.

Participation in the \$HVNA presale may be restricted in some territories. Prospective participants are responsible for satisfying themselves as to the legal treatment of participation in their own jurisdiction and should take independent professional advice where appropriate.

Forward-looking statements, including roadmap items, describe current intentions only and are subject to change in response to technical, commercial, regulatory or market conditions.

Version 8.1. This version corrects factual figures in version 8.0 so that they match the \$HVNA presale contract and the project's published pages: the token allocation (Section 6.2); the presale quantity, purchase limits and claiming schedule (Section 7); the \$HVNA holding level for Gold and the \$HVNA holding store-discount levels (Sections 4.2, 4.3 and 8); and the description of smart-contract assurance (Section 11). No other wording has changed.

12. About Havana Elephant

1. Executive Summary

Havana Elephant is a Web3 ecosystem built on Base. It brings together a utility token, two NFT collections, a creator platform and a sustainable-fashion brand around a common objective: enabling creators and community members to participate in the value generated across the ecosystem.

ContentLynk is the creator-platform pillar. Creators publish content, audiences engage with it, and a defined share of platform revenue is distributed to creators as remuneration for their content.

\$HVNA is the ecosystem's native utility token. It has a fixed supply of 100,000,000 tokens on Base, with no minting capability described in this document. The ecosystem also includes the 100-piece Genesis NFT collection and the forthcoming 9,900-piece Boldly Elephunky collection, which provide membership and platform benefits.

The Havana Elephant Brand provides the physical-commerce pillar through sustainable fashion and member discounts.

Ecosystem at a glance

Surface	What it is
\$HVNA Token	Fixed-supply utility token on Base; settlement and access across the ecosystem.
Genesis NFTs	100-piece founding collection; membership benefits and store discount.
Boldly Elephunky	Forthcoming 9,900-piece collection with tiered membership benefits.
ContentLynk	Creator platform distributing 55–75% of defined platform revenue to creators according to membership status.
Havana Elephant Brand	Sustainable fashion store with member discounts.

2. The Creator Economy Problem

The creator economy is built on content, attention and engagement, yet access to monetisation on established platforms is often conditional on follower, subscriber, watch-time or invitation thresholds. ContentLynk is designed around a different structure: creators can participate in platform revenue without a follower minimum.

The figures below describe the intended structural distinction. Conditions and programmes on third-party platforms vary by programme, geography and over time.

Platform	Indicative creator monetisation structure	Typical access condition
Instagram	Programme-dependent	Programme/eligibility dependent
TikTok	Programme-dependent	Follower and programme thresholds may apply
YouTube Shorts	Revenue-sharing programmes	Subscriber/view eligibility requirements may apply
Facebook	Programme-dependent	Eligibility/invitation requirements may apply
ContentLynk	55–75% structural revenue-share tiers	No follower minimum

3. ContentLynk — The Creator Platform

3.1 How creators are paid

Creator remuneration is designed as a function of engagement quality rather than raw follower count. Each piece of content accrues a quality score from the engagement it receives, with different interaction types weighted to reflect the effort and signal they represent.

- Likes carry a base weight.
- Comments are weighted more heavily.
- Shares are weighted most heavily.

A creator's remuneration is drawn from the platform's revenue pool in proportion to the quality score their content accrues, scaled by their membership revenue-share level. This is payment for content activity from revenue the platform earns; it is not a return on a sum invested and carries no guarantee.

3.2 Clear presentation of creator remuneration

ContentLynk is designed to be approachable by creators who may have little or no previous experience with crypto products. Creator remuneration is presented in clear dollar-based value, while settlement mechanics sit behind the user experience.

3.3 Access

The platform is designed without a follower minimum. Early growth activity has focused on creator markets including Indonesia, India and the Philippines.

3.4 Quality controls

The engagement model is designed to discourage shallow or coordinated gaming by weighting engagement quality and applying platform controls and monitoring.

4. Membership, Ownership and Revenue Share

A creator's revenue-share level is determined by membership or ownership status in the ecosystem. The percentages below are structural platform parameters and are not earnings forecasts.

4.1 Creator revenue-share tiers

Status	How it is obtained	Creator revenue share
Basic	Standard sign-up	55%
Silver	Silver entitlement	60%
Gold	Gold entitlement	65%
Platinum	Platinum entitlement	70%
OG Founder	Founding membership (1,000 places)	75%
Genesis	Ownership of a Genesis NFT	75%

4.2 Silver, Gold and Platinum

Tier	Boldly Elephunky NFT	\$HVNA holding	Revenue share	Store discount
Silver	Silver Elephant (\$150)	\$150	60%	10%
Gold	Gold Elephant (\$300)	\$300	65%	15%
Platinum	Platinum Elephant (\$500)	\$500	70%	25%

The forthcoming 9,900-piece Boldly Elephunky collection is structured into Silver, Gold and Platinum bands. The tiers become active on the collection's launch. Each tier may be reached either through the corresponding NFT or through the \$HVNA holding level shown.

4.3 Store benefits

Status	Store discount
Silver	10%
Gold	15%
Platinum	25%
\$HVNA holding of \$1,000 or more	30%
Genesis	30%

5. NFT Collections

5.1 Genesis Collection

The Genesis collection is the ecosystem's founding 100-piece NFT collection. Genesis ownership confers founding membership benefits, including the 75% creator revenue-share tier and a 30% store discount, together with early-access and community recognition features.

5.2 Boldly Elephunky Collection (forthcoming)

Boldly Elephunky is a planned 9,900-piece community collection structured into three bands. Each band is intended to confer a creator revenue-share level, store discount and additional community or platform benefits.

Band	Quantity	Mint price	Selected benefits
Silver Elephant	2,970	\$150	60% revenue share; 10% store discount; community and creator-tool benefits.
Gold Elephant	4,950	\$300	65% revenue share; 15% store discount; additional drops, voting and analytics benefits.
Platinum Elephant	1,980	\$500	70% revenue share; 25% store discount; premium access and collaboration benefits.

The quantities sum to 9,900 pieces. The collection is described as forthcoming; planned features may change before launch.

6. The \$HVNA Token

\$HVNA is the native utility token of the Havana Elephant ecosystem. Its intended functions include access, settlement and membership utility across the ecosystem. It carries no promise or guarantee of profit, return, yield or appreciation.

6.1 Token facts

Property	Detail
Name / Symbol	Havana Token / \$HVNA
Blockchain	Base (chain ID 8453)
Decimals	18
Total supply	100,000,000 — fixed
Inflation	None — no minting capability
Contract	0xb5561d071b39221239a56f0379a6bb96c85fb94f

The supply is fixed at 100,000,000 tokens. The token design described here contains no mechanism to mint additional tokens.

6.2 Token allocation

Allocation	Tokens	Share
Presale	15,000,000	15%
Community Treasury & Ecosystem Reserve	22,000,000	22%
ContentLynk Development	20,000,000	20%
Team & Advisors	10,000,000	10%
Liquidity	10,000,000	10%
Creator & Ecosystem Rewards	23,000,000	23%
Total	100,000,000	100%

The Community Treasury & Ecosystem Reserve is allocated for potential partnerships, liquidity, integrations and future incentives within the fixed token supply.

7. \$HVNA Presale Information

The \$HVNA presale makes a portion of the fixed supply available to participants in the ecosystem.

Property	Detail
Public offer commencement	28 July 2026
Tokens available	15,000,000 \$HVNA (15% of total supply)
Phase 1 — Genesis/Founder	\$0.051 per token, up to 5,000,000 tokens
Phase 2 — Public	\$0.073 per token
Minimum purchase	400 \$HVNA
Maximum purchase	200,000 \$HVNA per wallet
Maximum EU consideration	€850,000 during the applicable 12-month period beginning 28 July 2026
Network	Base
Presale contract	0x390Bdc27F8488915AC5De3fCd43c695b41f452FA

The €850,000 figure is an internal maximum for total consideration of the offer to the public in the European Union during the applicable 12-month period. It is below the €1,000,000 threshold specified in Article 4(2)(b) of Regulation (EU) 2023/1114 (MiCA).

The move from Phase 1 to Phase 2 pricing is made by the project; it is not triggered automatically when a quantity of tokens is sold.

7.1 Allocation and claiming

A purchase is recorded as an allocation in the presale contract when it is completed. Tokens are not transferred to the purchaser at the time of purchase. After the token generation event (TGE), purchasers claim their tokens to their verified wallet in three instalments: 40% when claiming opens, 40% after 90 days and 20% after 180 days.

Participation in the presale is subject to identity verification (KYC) and anti-money-laundering screening. Participation may be restricted by jurisdiction.

The presale provides a route to acquire \$HVNA for its intended ecosystem utility. No return, yield or appreciation is promised or implied.

8. Havana Elephant Brand

The Havana Elephant Brand store is the ecosystem's sustainable-fashion pillar. Membership and ownership statuses can provide store discounts, ranging from 10% at Silver to 30% for Genesis holders and for holdings of \$1,000 or more of \$HVNA, under the structure described in this document.

The store is intended to provide a physical-digital connection between ecosystem membership and tangible products.

9. Technology and Transparency

9.1 Blockchain

\$HVNA is deployed on Base, chain ID 8453, with 18 decimals. The token contract address stated in this document is 0xb5561d071b39221239a56f0379a6bb96c85fb94f.

9.2 Fixed supply

The stated maximum token supply is 100,000,000 and the token design described in this document has no minting capability.

9.3 Project transparency

Havana Elephant is identified as the project in this document. The project describes its founder as publicly identified and treats transparency about project structure, token supply and ecosystem utility as an operating principle.

9.4 Regulatory positioning

This document is a general project information document, not a MiCA crypto-asset white paper. The \$HVNA public offer is being operated with an internal maximum of €850,000 of total EU consideration during the applicable 12-month period beginning 28 July 2026.

10. Risks and Important Considerations

Crypto-assets involve material risks. Prospective participants should consider, among other things, the following before deciding whether to participate in the \$HVNA presale:

- \$HVNA may lose value in part or in full.
- Liquidity and transferability can depend on technical, market and regulatory conditions.
- The ecosystem is under development and planned products, integrations, benefits or roadmap items may be delayed, changed or discontinued.
- Smart contracts, wallets, blockchain networks and other software can be affected by defects, vulnerabilities, outages or user error.
- The regulatory treatment of crypto-assets can change and can differ between jurisdictions.
- Utility depends on the continued operation and development of the relevant Havana Elephant ecosystem products and services.
- Creator revenue-share percentages describe platform allocation rules, not guaranteed creator earnings.

Nothing in this document should be treated as a prediction of the future market value of \$HVNA or of the commercial performance of the Havana Elephant ecosystem.

11. Roadmap

Roadmap items describe current intentions and may change.

Period	Current intention
Q1 2026 — Foundation	Smart-contract development and public source verification; community building and presale preparation; ContentLynk technical specifications.
Q2 2026 — Launch	NFT collection activity; Web3 integration; marketing activity; ContentLynk alpha development.
Q3 2026 — ContentLynk Launch	ContentLynk early-access launch; creator onboarding; initial advertising marketplace; mobile-app development.
Q4 2026 — Growth	Advanced loyalty features; partnership development; community-governance activation.

12. About Havana Elephant

The Havana Elephant ecosystem combines ContentLynk, the Havana Elephant Brand, NFT collections and the \$HVNA utility token.

The project describes its founder as publicly identified, a Chartered Financial Planner with four decades of experience in financial services and the author of three books on cryptocurrency.

The ecosystem is designed around fixed token supply, creator remuneration, membership utility, physical products and transparent project information.

Live Life Big in Style. Celebrate.
